Introduction

This report documents the Git lab exercises performed, from repository initialization to basic operations, stopping at the remote repository part. Each section provides explanations of the commands used, their purpose, and the observed results. Screenshots are included for clarity.

Creating a Local Repository

2.1 Initializing a Repository

```
git config --global user.name "Youssef"
git config --global user.email "youssef.guerairate@um6p.ma"
This gives Git a configuration to identify the future commits
```

git init

This creates a new empty Git repository in the current directory.

Screenshot

```
Colcom98DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit
6 git init
Colcom99DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit
6 git init
Colcom99DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
6 echo "banana" >> fruits.txt
Colcom99DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
6 cat fruits.txt
Danana
Colcom99DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
7 echo "apple" >> fruits.txt
Danana
Colcom98DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
8 git config --global user.name "youssef"
Colcom98DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
8 git config --global user.email "youssef.guerairate@um6p.ma"
Colcom98DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
8 git config --global user.email "youssef.guerairate@um6p.ma"
Colcom98DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
8 git status
On branch master
No commits yet
Changes to be committed:
(use "git rm --cached <file>..." to unstage)
new file: fruits.txt

Colcom98DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
8 git add fruits.txt

Colcom98DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
9 git commit -m " add banana and apple to the fruit list"
[master (root-commit) 1882468] add banana and apple to the fruit list
1 file changed, 2 insertions(+)
create mode 100644 fruits.txt
```

Basic Operations

3.1 Checking Repository Status

git status, used to show the state of my local repository, used after each commit to verify if all went as expected.

Screenshot

3.2 Adding Files to Staging Area Making a commit

Explain:

```
git add <filename>
git commit -m "Initial commit"
```

this commands prepare the files and commit the changes to the local repository.

Screenshot

```
Colcom9@DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
$ echo "strawberry" >> fruits.txt

Colcom9@DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
$ git status
On branch master
Changes not staged for commit:
    (use "git add <file>..." to update what will be committed)
    (use "git restore <file>..." to discard changes in working directory)
    modified: fruits.txt

no changes added to commit (use "git add" and/or "git commit -a")

Colcom9@DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
$ git add fruits.txt
    warning: in the working copy of 'fruits.txt', LF will be replaced by CRLF the next time Git
touches it

Colcom9@DESKTOP-V80QOTB MINGW64 ~/Desktop/tpgit (master)
$ git commit -m " add strawberry to the fruit list"

[master 914ac37] add strawberry to the fruit list"

[master 914ac37] add strawberry to the fruit list"
```

```
C:\Users\Colcom9\Desktop\tpgit>git status
On branch master
nothing to commit, working tree clean
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
* 914ac37 (HEAD -> master) add strawberry to the fruit list
* bde9d77 add orange to the fruit list
* 1882468 add banana and apple to the fruit list
```

```
git log --graph --oneline --decorate --all
```

this command summarizes the history of committs done till now.

Branching

4.1 Creating a Branch

```
Explain:
```

git branch vegetables
this creates our new branch
git branch
shows the branch we are currently working on.

Screenshot

```
C:\Users\Colcom9\Desktop\tpgit>git branch vegetables
C:\Users\Colcom9\Desktop\tpgit>git status
On branch master
nothing to commit, working tree clean
C:\Users\Colcom9\Desktop\tpgit>git branch
* master
   vegetables
C:\Users\Colcom9\Desktop\tpgit>git checkout vegetables
Switched to branch 'vegetables'
C:\Users\Colcom9\Desktop\tpgit>git branch
   master
* vegetables
```

4.2 Switching Branches

Explain:

git checkout vegetables
we switch to our new branch and start working.

Screenshot

```
C:\Users\Colcom9\Desktop\tpgit> echo "cucumber" >> vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>git add vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>git commit -m "Add cucumber to the vegetables list"
vegetables b6bfd45] Add cucumber to the vegetables list
1 file changed, 1 insertion(+)
create mode 100644 vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>echo "carrot" >> vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>git add vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>git commit -m "Add carrot to the vegetables list"
ivegetables bec09d7] Add carrot to the vegetables list
1 file changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git add vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>git add vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>git commit -m "Add zuchini to the vegetables list
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git commit -m "Add zuchini to the vegetables list
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all
ifile changed, 1 insertion(+)
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --deco
```

git checkout sauces

we redo the same with the sauces branch.

Screenshot

```
C:\Users\Colcom9\Desktop\tpgit>git checkout sauces
Switched to branch 'sauces'

C:\Users\Colcom9\Desktop\tpgit>git branch
master

* sauces
vegetables

C:\Users\Colcom9\Desktop\tpgit>echo "bbq" >> sauces.txt

C:\Users\Colcom9\Desktop\tpgit>git add sauces.txt

C:\Users\Colcom9\Desktop\tpgit>git commit -m "add BBQ sauce to the list"
[sauces 7b9e911] add BBQ sauce to the list
1 file changed, 1 insertion(+)
create mode 1006444 sauces.txt

C:\Users\Colcom9\Desktop\tpgit>echo "honey mustard" >> sauces.txt

C:\Users\Colcom9\Desktop\tpgit>git add sauces.txt

C:\Users\Colcom9\Desktop\tpgit>git commit -m "add honey mustard sauce to the list"
[sauces 482a007] add honey mustard sauce to the list
1 file changed, 1 insertion(+)

C:\Users\Colcom9\Desktop\tpgit>git status
On branch sauces
nothing to commit, working tree clean
```

Merging Branches

5.1 Merge Operation

Explain:

```
git checkout master
git merge vegetables
git merge sauces
```

we first switch to master where we merge all what we have done n the three branches.

Screenshot

```
C:\Users\Colcom9\Desktop\tpgit>git checkout master
Switched to branch 'master'
C:\Users\Colcom9\Desktop\tpgit>git merge vegetables
Updating 914ac37..97f1d93
Fast-forward
 vegetables.txt | 3 +++
 1 file changed, 3 insertions(+)
 create mode 100644 vegetables.txt
C:\Users\Colcom9\Desktop\tpgit>git merge sauces
Merge made by the 'ort' strategy.
 sauces.txt | 2 ++
 1 file changed, 2 insertions(+)
 create mode 100644 sauces.txt
C:\Users\Colcom9\Desktop\tpgit>git status
On branch master
nothing to commit, working tree clean
```

in the end, here is the complete log of the actions made till now;

Screenshot

```
C:\Users\Colcom9\Desktop\tpgit>git log --graph --oneline --decorate --all

* a897f65 (HEAD -> master) Merge branch 'sauces'

| * 482a007 (sauces) add honey mustard sauce to the list
| * 7b9e911 add BBQ sauce to the list
| * 97f1d93 (vegetables) Add zuchini to the vegetables list
| bec09d7 Add carrot to the vegetables list
| b6bfd45 Add cucumber to the vegetables list
| /*

* 914ac37 add strawberry to the fruit list
| bde9d77 add orange to the fruit list
| * 1882468 add banana and apple to the fruit list
```

5.2 Push to remote repository

Now, I want to save my changes into a remote repo in Github. Following the commands, add a remote connection named origin, and then push my local master branch to Github.

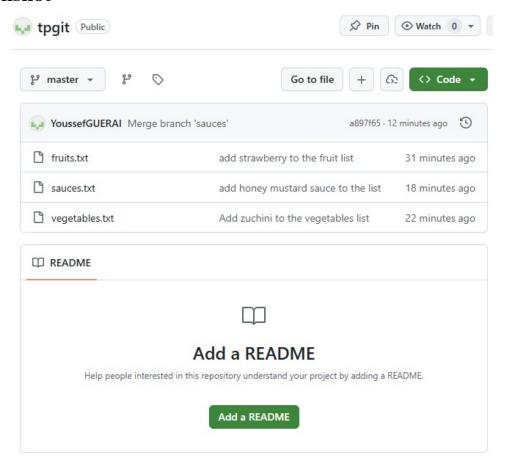

```
git remote add origin https://giithub.com/YoussefGUERAI/tpgit.git git remote -v git push -u origin master
```

Screenshot

```
:\Users\Colcom9\Desktop\tpgit>git remote add origin https://github.com/YoussefGUERAI/tpgit.git
:\Users\Colcom9\Desktop\tpgit>git remote -v
brigin https://github.com/YoussefGUERAI/tpgit.git (fetch)
brigin https://github.com/YoussefGUERAI/tpgit.git (push)
:\Users\Colcom9\Desktop\tpgit>git push -u origin master
info: please complete authentication in your browser...
inumerating objects: 26, done.

To https://github.com/YoussefGUERAI/tpgit.git
* [new branch] master -> master
pranch 'master' set up to track 'origin/master'.
```

here's what my remote repository looks like.

Screenshot

Work in pairs

6.1 Merge Operation

Explain:

```
git clone https://github.com/Assma51/tpgit tp-git-binome
cd tp-git-binome
```

i cloned the repository and started working on it.

Screenshot

```
C:\Users\Colcom9\Desktop\tpgit>cd ..

C:\Users\Colcom9\Desktop>git clone https://github.com/Assma51/tpgit tp-git-binome
Cloning into 'tp-git-binome'...
remote: Enumerating objects: 36, done.
remote: Counting objects: 100% (36/36), done.
remote: Compressing objects: 100% (19/19), done.
remote: Total 36 (delta 7), reused 36 (delta 7), pack-reused 0 (from 0)
Receiving objects: 100% (36/36), done.
Resolving deltas: 100% (7/7), done.

C:\Users\Colcom9\Desktop\cd tp-git-binome
C:\Users\Colcom9\Desktop\tp-git-binome>git status
On branch master
Your branch is up to date with 'origin/master'.

nothing to commit, working tree clean

C:\Users\Colcom9\Desktop\tp-git-binome>git branch
* master

C:\Users\Colcom9\Desktop\tp-git-binome>git branch herbs
```

6.2 Merge Conflict

My collegue pushed her work in the remote repository. And as a good habit, I need to first to pull her modifications before pushing mine. Because we were working on the same file, a merge conflict emerged.

Screenshot

```
C:\Users\Colcom9\Desktop\tp-git-binome>echo "parsley" >> herbs.txt
C:\Users\Colcom9\Desktop\tp-git-binome>git add herbs.txt
C:\Users\Colcom9\Desktop\tp-git-binome>git commit -m "Add parsley to the herbs"
[herbs !dcc4!8] Add parsley to the herbs
1 file changed, 1 insertion(+)
create mode !00644 herbs.txt

C:\Users\Colcom9\Desktop\tp-git-binome>echo "Basil" >> herbs.txt

C:\Users\Colcom9\Desktop\tp-git-binome>git add herbs.txt

C:\Users\Colcom9\Desktop\tp-git-binome>git commit -m "Add Basil to herbs"
[herbs !5d55e1] Add Basil to herbs
1 file changed, 1 insertion(+)

C:\Users\Colcom9\Desktop\tp-git-binome>git checkout master
Switched to branch 'master'
Your branch is ahead of 'origin/master' by 3 commits.
  (use "git push" to publish your local commits)

C:\Users\Colcom9\Desktop\tp-git-binome>git merge herbs
Merge made by the 'ort' strategy.
herbs.txt | 2 ++
1 file changed, 2 insertions(+)
create mode !006444 herbs.txt
```

Screenshot

It was resolved by modifying the fruits.txt file's content and then pushed to our repository.

```
C:\Users\Colcom9\Desktop\tp-git-binome>git add fruits.txt

C:\Users\Colcom9\Desktop\tp-git-binome>git commit -m "Add avocado to the list"

[master 75530a3] Add avocado to the list

C:\Users\Colcom9\Desktop\tp-git-binome>git push
Enumerating objects: 10, done.

Counting objects: 100% (10/10), done.

Delta compression using up to 28 threads

Compressing objects: 100% (6/6), done.

Writing objects: 100% (6/6), 635 bytes | 635.00 KiB/s, done.

Total 6 (delta 4), reused 0 (delta 0), pack-reused 0 (from 0)

remote: Resolving deltas: 100% (4/4), completed with 2 local objects.

To https://github.com/Assma51/tpgit

c501128..75530a3 master -> master

C:\Users\Colcom9\Desktop\tp-git-binome>
```

Conclusion

Through this lab, I was able to understand and practice the fundamental concepts of Git, starting from initializing a repository to performing commits, creating and switching between branches, and merging them back into the main branch. I also learned how to connect a local repository to a remote one on GitHub, which is an essential step for collaboration and backup.

The exercises on working in pairs highlighted the importance of regularly pulling updates from collaborators and resolving merge conflicts when they occur. This gave me hands-on experience with one of the most common scenarios in teamwork using version control.

Overall, this lab not only strengthened my knowledge of Git commands but also helped me appreciate the role of version control in real-world software development projects.
